EDUCATION

Dartmouth College

Aug 2025 - June 2029

Bachelor of Arts in Computer Science and Human Centered Design

GPA: 3.9/4.0

- **Relevant Coursework:** Problem Solving Via Object Oriented Programming (Data Structures & Algorithms) [java], Software Design & Implementation [C], Discrete Mathematics*, Foundations of Applied Computer Science*, Calculus III, Intro to Programming and Computation [python]
- **Activities:** ColorStack Chapter @ Dartmouth (First Year's Representative & Treasurer), HealthX Lab (ML Research), CodePath, First-Gen Office (STEM Academic Fellow, Member)
- **Honors/Awards:** AI in the Physical World Award, Technigala 2026 (DALI Lab) – for **Sema Health**, an offline-first LLM mobile app for multilingual healthcare access; with \$1,000 grant prize for further development

SKILLS

Languages: C, Java, Python, JavaScript/TypeScript, Dart, SQL, HTML/CSS

Frameworks: Django, Flask, FastAPI, React, Node.js, Flutter, NumPy, pandas, scikit-learn, TensorFlow, Tailwind, Bootstrap

Tools: Git (Github), Linux, AWS, MySQL, Make, bash, Valgrind, VSCode, IntelliJ IDEA, Figma, Miniconda, APIs, Tailscale

Other Interests: Board Games, Drumming, Soccer, Anime

WORK & LEADERSHIP EXPERIENCE

Evergreen AI, Dartmouth College

Hanover, NH

Software Development Intern & Project Manager

Oct. 2025 – Present

- Built a data pipeline transforming **3M+** dialogue turns from **200+** student writers into validated, **Big Five**-tagged training data for Dartmouth's Wellness ChatBot, persisted to a versioned **MySQL** database
- Shipped a real-time student/chatbot chat tool (**Flask-SocketIO**) enforcing minimum conversation lengths, unique message IDs, and structured exports for downstream model training
- Built a plagiarism-detection system using **MinHash** signatures and **locality-sensitive hashing** to flag near-duplicate submissions (**>70%** similarity) in the background, protecting training-data integrity
- Designed a **red-teaming** sandbox for testers to probe a candidate chatbot's safety guardrails via live chat, logging reproducible, severity-rated findings that guided guardrail fixes

The Dartmouth — America's Oldest College Newspaper

Hanover, NH

Software Development Intern

Apr. 2026 – Present

- Built a contact-resolution platform combining **DuckDuckGo**, **LDAP**, and **LinkedIn** lookups, helping The Dartmouth's outreach team reconnect with 50+ alumni classes and enrich **1,849** records to **86%** contact coverage
- Added checkpoint resumability, deduplication, and **API rate-limiting**, letting multi-hour batch runs recover from failures without losing or duplicating data

PROJECTS

Sema Health AI | *Flutter, Gemma (MediaPipe), ONNX Runtime, NLLB-200, SQLite, OpenStreetMap*

- Collaborated in building an offline-first health app (**Flutter**) running **Gemma** on-device via **MediaPipe**, enabling private inference with no network connection required
- Designed a **YAML**-defined clinical triage engine, grounded via function-calling against a clinical knowledge graph, that forces mandatory emergency escalation before any AI-generated response
- Built an offline multilingual voice pipeline (ASR/TTS, **NLLB-200** translation, 5 languages) on **ONNX Runtime** with **SHA-256**-verified model downloads and a safety guard blocking dosage claims and unlisted medications

Tiny Search Engine | *C, Bash, Make*

- Built a compact search engine in C with a **BFS** web crawler, an **inverted index**, and a querier supporting **AND/OR** boolean queries
- Wrote regression test suites across **crawler** → **indexer** → **querier** covering argument validation, query syntax, and case-folding, catching integration bugs before deployment

Collaborative Graphical Editor | *Java, sockets*

- Built a **multi-client TCP server** (thread-per-client) with a custom message protocol (ADD, MOVE, RECOLOR, DELETE), server-authoritative IDs, and full state sync on new client join
- Designed a thread-safe **Sketch** structure (**TreeMap**, synchronized reads/writes) supporting Z-order shape selection and freehand **Polyline** hit-testing

ForumAbroad | *Python (Django), Google Vertex AI, Tailwind CSS, SQL*

- Built a full-stack study-abroad forum with a **3-level recursive comment model** and per-user vote/view tracking; eliminated N+1 queries via bulk pre-fetching and **F()** annotations
- Integrated a **Google Vertex AI RAG** assistant auto-indexed from forum content via Django signals (**SHA-256** change detection), with anti-hallucination prompting and cited sources
