EDUCATION

Dartmouth College

Hanover, NH

Bachelor of Arts in Computer Science and Human Centered Design

GPA: 3.9/4.0

- **Relevant Coursework:** Intro to Programming [python], Calculus III, Problem Solving Via Object Oriented Programming (Data Structures & Algorithms) [java], Software Design & Implementation [C], Discrete Mathematics*, Foundations of Applied Computer Science*
- **Activities:** ColorStack Chapter @ Dartmouth (First Year's Representative & Treasurer), HealthX Lab (ML Research), CodePath, Dartmouth AI Club, First-Gen Office (STEM Academic Fellow, Member)

WORK & LEADERSHIP EXPERIENCE

Evergreen AI, Dartmouth College

Hanover, NH

Software Development Intern

Oct. 2025 – Present

- Engineered a multi-stage dialogue processing pipeline ingesting **3M+** turns from **200+** research assistants, generating **Big Five** personality profiles per session and enforcing structural validation before persisting to a versioned **MySQL** schema
- Built a real-time **collaborative dialogue simulator** (dialogue chat) using **Flask-SocketIO** with dual-room isolation, UUID-keyed message history, and enforced chat-completion thresholds for synchronized multi-user training data generation
- Containerized the application with **Docker** and deployed via **GitHub Actions CI/CD** to **AWS ECS**, with **RDS MySQL** and **Nginx** reverse proxy, supporting zero-downtime rollouts and rapid iteration across staging and production environments

The Dartmouth — America's Oldest College Newspaper

Hanover, NH

Software Development Intern

Apr. 2026 – Present

- Built an **alumni intelligence platform** enriching **1,849** historical staff records with inferred contact data and current employer profiles, enabling The Dartmouth's outreach teams to engage alumni across **50+ graduating classes**
- Designed a multi-source **contact resolution pipeline** integrating **DuckDuckGo DDGS**, Dartmouth's LDAP directory, and LinkedIn snippet parsing, achieving **86%** profile coverage and surfacing verified employer data for **641** alumni
- Engineered fault-tolerant **batch processing** with checkpoint resumability, composite-key deduplication, and API rate-limiting to reliably enrich thousands of records across multi-hour runs without data loss

Tanzania Students' Achievement Foundation

Dar es Salaam, Tanzania

Software Development Intern

Jan. 2025 – Jul. 2025

- Built a **dual-track Django admissions portal** for **1000+** users with custom decorators, token-based email activation, and a singleton portal-settings model controlling application deadlines and open/close state
- Designed a **13-section multi-step application workflow** with an auto-validating completion state machine, **65+** CRUD endpoints for nested-able application records, and per-user sanitized file upload paths, deployed with Passenger WSGI

PROJECTS

Tiny Search Engine | C, Bash, Make

- Developed a compact search engine in C, featuring a **BFS** crawler for efficient web traversal, an **inverted index** for optimized data storage, and a querier capable of processing **AND/OR** boolean search queries
- Optimized program by creating regression testing bash scripts for the modules **crawler** → **indexer** → **querier**, covering argument validation, query syntax edge cases, and case-folding correctness, with scripts catching integration bugs along

Collaborative Graphical Editor | Java

- Built a multi-client TCP server using a thread-per-client model with a custom space-delimited message protocol (ADD, MOVE, RECOLOR, DELETE) and server-authoritative unique ID assignment; full state snapshot on join for new clients
- Designed a thread-safe **Sketch** data structure backed by a **TreeMap** with synchronized reads/writes; descending key iteration handles Z-order shape selection and geometric hit-testing supports freehand **Polyline** shapes

ForumAbroad | Python (Django), Google Vertex AI, Tailwind CSS, SQL

- Built a full-stack study-abroad discussion forum with a **3-level recursive comment model**, per-user vote and view tracking, and query optimization via bulk pre-fetching and **F()** annotations to eliminate N+1 queries
- Integrated a **Google Vertex AI RAG** assistant auto-indexed from forum content via Django signals using **SHA-256** change detection, with anti-hallucination prompting and structured source citations

TECHNICAL COMPETENCIES

Languages & Frameworks: C, Make, bash, Java, Python (Django, Flask, FastAPI), Dart (Flutter), HTML5, CSS (Tailwind CSS, Bootstrap), JavaScript (Node.js, TypeScript, React)

Developer Tools: Git (GitHub), APIs, Linux, Figma, VSCode, IntelliJ IDEA, AWS, Valgrind, SQL, Miniconda

Languages: English, Swahili

Interests: Card Games, Soccer, Anime
